OUR VISION

ETCWEB3 - THE MINING PROJECT 2.0

ET COIN WEB3 is a mining project which works with two of the most prevalent consensus mechanisms: Proof-of-Work (PoW) and Proof-of-Stake (PoS). Besides being the first and biggest E.T. the Extra-Terrestrial community token, it also includes a social ecosystem with NFTs 3D Art, GameFi, rewards for token holders, swap & staking options and a free mobile app for Android and iOS.

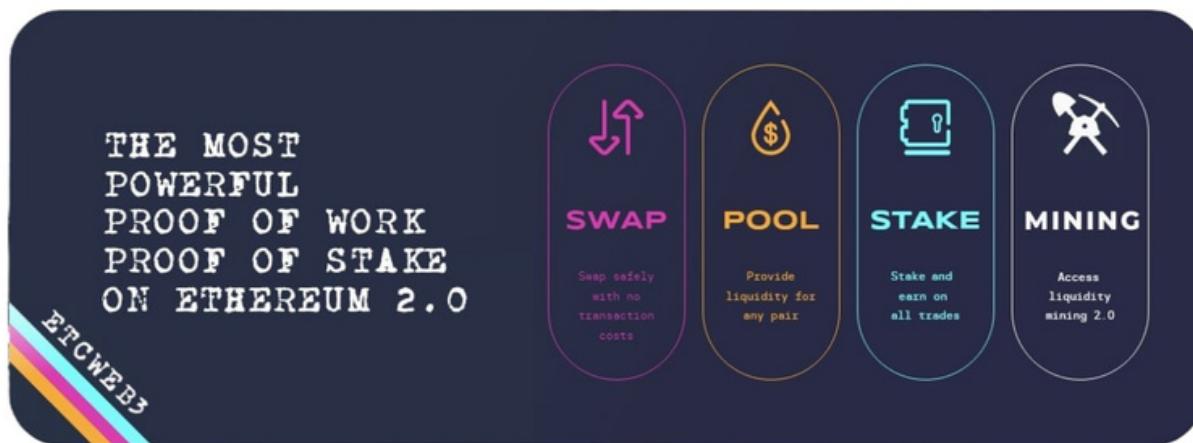

Network impact

ET COIN WEB3 is the community token of one of the 80's greatest movie characters.

Crypto communities are integral to any blockchain project's growth, awareness, adoption, and engagement and we know that.

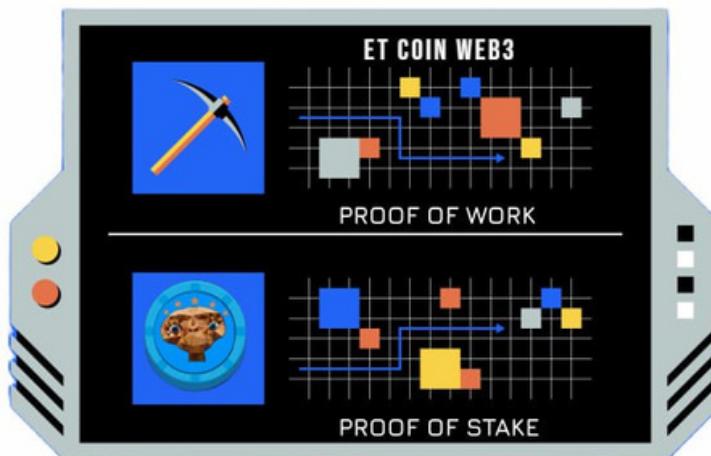

Vision 2023

We have a clearly defined public-facing executive team that handles the vision, execution, financials, and marketing of the token with a long history in the crypto industry.

Why an ERC-20 ET Coin?

Ethereum 2.0 leverages blockchain technology for its decentralized, transparent system. The technology enables functionality beyond digital currency, such as decentralized applications and smart contracts. The developer community is one of the largest. The Ethereum platform processes transactions faster than Bitcoin. Bitcoin uses a proof-of-work (PoW) consensus algorithm, while Ethereum uses a proof-of-stake (PoS) consensus algorithm.

BLOCKCHAIN PLATFORM

ET Coin is free, open source and fairly mined (PoW) blockchain and we are also on Proof-of-Stake 2.0. With proof of stake, a validator is chosen randomly, based in part on how many coins they have locked up in the blockchain network, also known as staking. The coins act as collateral and when a participant, or node, is chosen to validate a transaction, they receive a reward. Users will be able to issue and control utility, GameFi, NFTs and securities digital assets.

Every transaction that is made with ETCWEB3 will be stored on our ET Coin Web3 blockchain. Blockchain information is not stored in one place though, it is stored across thousands of computers called nodes.

ET Coin Web3 ecosystem is an open-source ecosystem of decentralized applications (DApps), protocols, and platforms that will enable the creation of smart contracts and decentralized applications (DApp) on the Ethereum blockchain.

Why does Proof-of-Stake matter?

Not only is proof of stake a faster, more efficient, and cheaper consensus mechanism for verifying transactions on the blockchain, it also uses considerably less energy. Nearly every performance metric is improved when you adopt a proof-of-stake consensus mechanism. Throughput capacity is boosted, transaction finality times drop significantly, overall transaction processing speed is improved, and transaction fees are lowered. It would become much easier to build on top of the ET Coin blockchain, and that means a sudden explosion of value for the ET Coin Web3 ecosystem.

For PoS mining, miners are not rewarded for solving cryptographic puzzles. Instead, they are rewarded for validating transactions and adding new blocks to the blockchain. The amount of cryptocurrency that a miner can earn is proportional to the amount of cryptocurrency that they have staked.

Initially, the supported platforms will be Windows and Linux and the MacOS platform will be available soon.

ETCOINWEB3

ETCWEB

ETCOINWEB3

ETCWEB

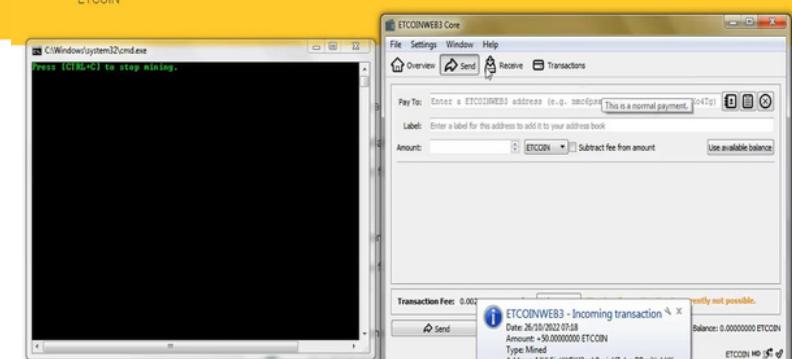

ET Coin Web3 will have its own cryptocurrency platform for mining. You will be able to sell or buy computing power and support the digital ledger technology revolution. This mining software is going to use 3rd party miners for automatic algorithm switching.

ET Coin Web3 mining software makes use of a computer's graphics processing unit (GPU) to facilitate the discovery of blocks. The bulk of today's mining is achieved via a mining pool, which distributes resources and disburses rewards over a network.

ETCOINWEB3

ETCWEB

The users will be able to follow all the transactions on the software and receive two types of rewards for mining: new coins created with each new block, and transaction fees from all the transactions included in the block.

Miners will get mining reward in their ET Coin digital wallet.

Check it on <https://www.etcweb3.com/staking>.

MINING ET COIN

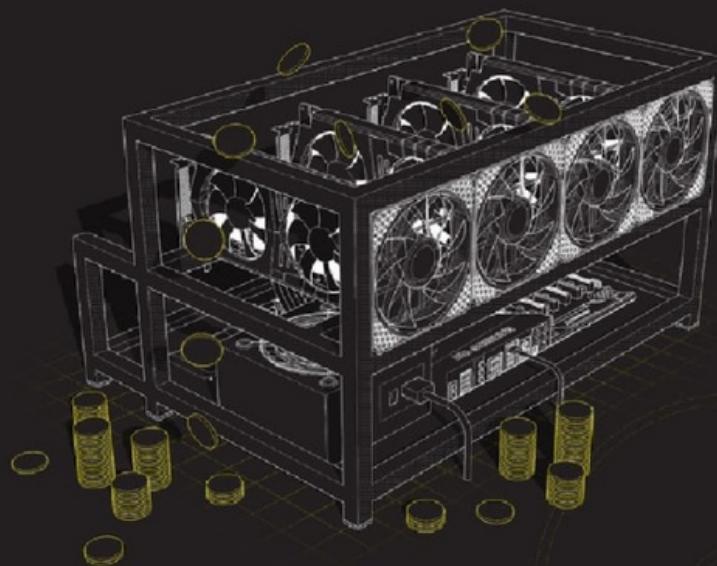

PROOF-OF-WORK

To earn this reward, the miners compete to solve a difficult mathematical problem based on a cryptographic hash algorithm. The solution to the problem, called the Proof of Work, is included in the new block and acts as proof that the miner expended significant computing effort. A PoW ET Coin miner would need:

- A Windows/Linux/Mac OS computer
- One or more ASIC miners for Scrypt-based cryptocurrencies (non-exclusive)
- Power supplies for ASIC miners
- An account with a mining pool
- Access to relatively cheap electricity
- An ET Coin digital wallet where the mining pool will send the mining rewards

THE ANATOMY OF A

ET COIN WEB 3 CRYPTO MINE

KEY CHARACTERISTICS OF A SUCCESSFUL MINE

Successful rigs need to pack a punch but still be light on resources.

High-powered processors to maximise conversion power

Energy-efficient, so your electricity costs don't eat away your profits

ASIC MINERS

ASICs are devices optimized to perform one specific task; in the case of Scrypt ASIC miners, this task consists in calculating as many hashes as possible over a short period of time. This allows miners to have more chances of finding the proper hash for a block they have prepared. After several trial tests, we found that this type of equipment is the more effective for mining our token.

ASIC miners, in comparison to GPUs, are louder and usually generate more heat. This means that ASICs need to be housed in a dedicated room, such as a garage or a basement, or in a purpose-built shed. It is recommended that the location where ASIC miners and the computer used to control them are housed has proper ventilation and can be cooled down easily.

Investing without equipment

If an investor does not have mining equipment, he/she will directly receive rewards tokens daily from our exclusive ET mining rig.

NFT EXPOPLANET & MARKETPLACE

NFT Expo Planet is the first commercial digital gallery in the world with a fully immersive 3D interface and a marketplace for physical goods.

This exclusive space gallery on the ET COIN WEB3 ecosystem seeks to open the doors for NFT 3D art creators to share their projects in our metaverse. Holders will have access to games and activities for prizes in cryptocurrencies.

Community is the most important thing here: every 15 days 2 community member NFT collections will be chosen and given a chance to exhibit and sell their pieces at the NFT Expo Planet.

The commissions of these sales will be distributed equally among the main holders.

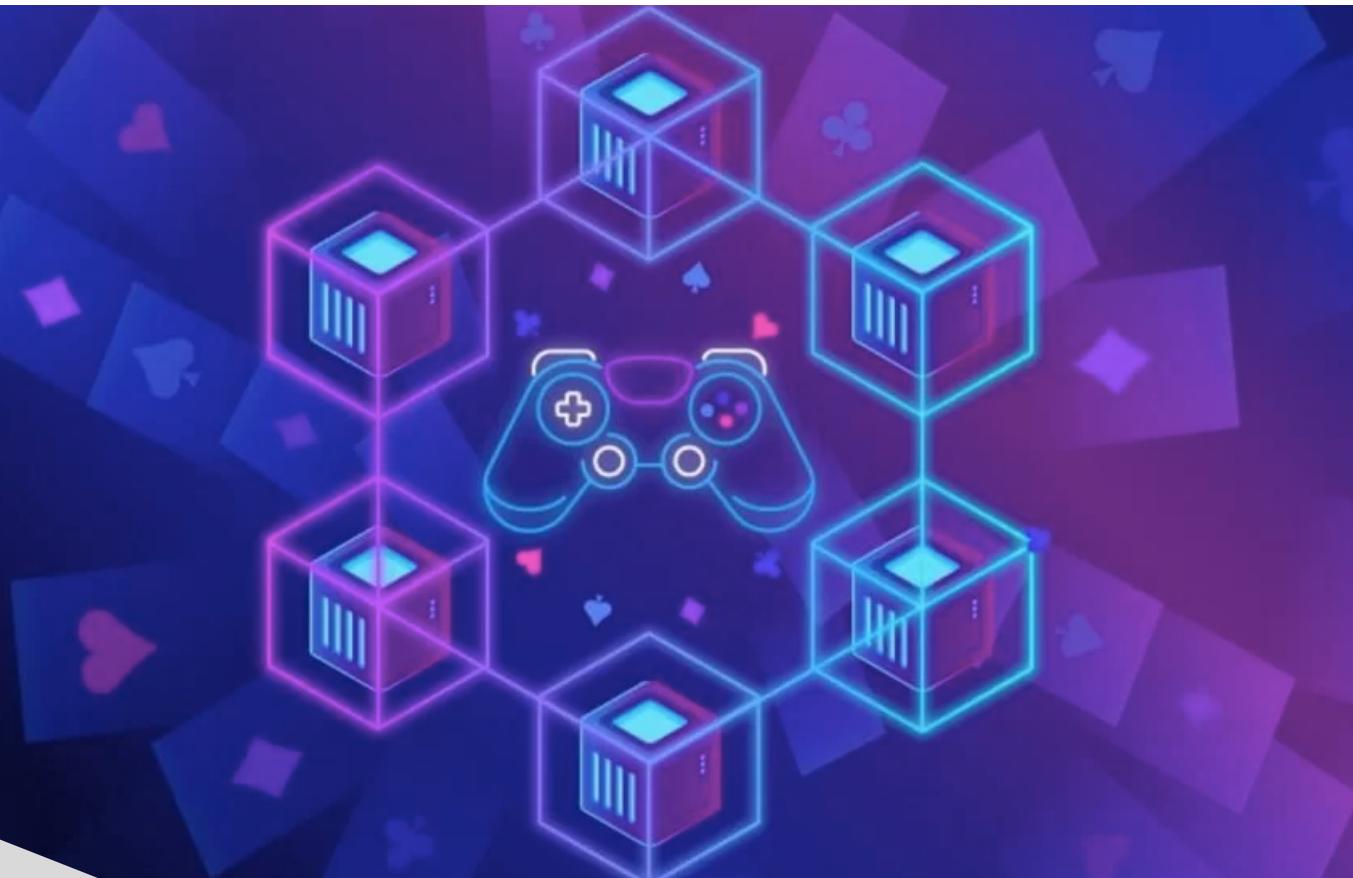

GAME-FI CONCEPT

We believe in a robust and inclusive world economy, where all participants have the possibility of access without distinction of race, gender, nationality or socioeconomic level.

Our games on the ET COIN WEB3 platform will be accessible for an amount of our cryptocurrency equivalent to 3.33 USD, a sum that will allow entry of all participants without economic exclusion as seen on other platforms.

Players earn ET COIN tokens during gameplay and can trade them for other currencies on ET Swap.

In addition, there will be a rewarding scholarship program with a minimum investment. It is a game developed under Play-to-Earn principles.

STAKING 2.0 & REWARDS

Check it on <https://www.etccoinweb3.com/swapping-2-0>

Staking is a way to reward our community members for having a long-term mindset and protecting their cryptoassets from speculation. By staking tokens, the investor is going to be able to earn ET COIN rewards when locking them through our interface. Going forward, staking ET COIN will give a vote and say in the use of the Community Treasury.

The interests are going to be paid in ET COIN and the APY (Annual Percentage Yield) will make the investment very attractive for future users. Compound interest will be considered automatically so the user will generate better returns by saving time between transactions. We will also put into play incentive programs for stakeholders to add value to ET COIN WEB3.

In the further future, our community may update our staking system with more interesting annual percentage yields to give better rewards to those who have added measurable value to our ecosystem. There is still much research and experimentation to be done on this aspect of governance.

Finally, stakeholders who are not players or are not interested in participating in governance could delegate their voting rights to other parties.

ET COIN SWAP 2.0

Check it on <https://www.etcoinweb3.com/swapping-2-0>

The swap option will allow users to exchange assets while maintaining full ownership of their cryptos.

ET COIN WEB3 will integrate fifteen (15) digital assets as trading pairs of the top fifty (50) with the largest market capitalisation and we will continually add new cryptocurrencies according to the demand of our community.

We aspire to a streamlined experience that eliminates fragmentation.

An increasing number of large companies now accept digital assets as a payment method, which means that cryptocurrencies are entering further on our daily lives. In order to achieve mass adoption, new users have to use platforms that offer full transparency when it comes to trading fees. ET COIN will offer extremely competitive rates as we are unanimously convinced that community adoption is what will take the project forward.

Considering that, we will offer a fixed exchange fee which means the user would know how many tokens will be received up front, in exchange for a slightly higher transaction fee. Alternatively, the user will be able to cut costs by using a floating rate and exchanging their digital assets at the current market price.

TOKEN DISTRIBUTION

25% FAIRLAUNCH

Public Sale on
PinkSale Finance.

15% LIQUIDITY POOL

It will provide the liquidity that is necessary for decentralized exchanges to function with our token by allowing users to deposit their ET assets into a pool, and then trade them on our or others DEX.

15% CEX

To be listed on trusted and secure central exchanges.

We have calculated this proportion in order to lock up as collateral to help secure our ET blockchain network.

10% STAKING (POS)

10% MINING DEVELOPMENT (POW)

It's needed for ET coin Web3 to maintain and secure its distributed ledger of transactions in a decentralized way. It gets better over time and economic incentives back it.

10% REWARDS

To foster loyalty and reward users in a form of ET blockchain tokens.

7% HUGE MARKETING CAMPAIGNS

It will be used for several marketing strategies like Business to Business (B2B), Call To Action (CTA), Close Range Marketing (CRM), Telegram VIP groups, Twitter advertising and YouTubers campaigns from all around the world.

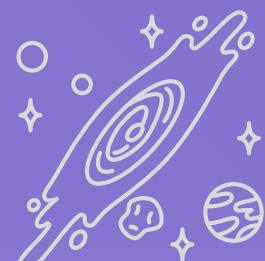

5% ECOSYSTEM

To combine the ET Coin design with the utility of protocols that will help develop the ecosystem to bring about a new era of meme coins.

3% TEAM

Team tokens for operating expenses will only account for 3% of the total ETCWEB3 supply.
